

**PARTS FABRICATION PROCESSES AND FACILITIES-
AN EXTENDED ANALYSIS**

J.C. Diaz

Lawrence Livermore National Laboratory, Livermore, California

ABSTRACT

Source terms associated with weapons parts fabrication have been detailed for CALIOPE. In detailing the processes we have identified a range of alternatives in equipment and materials' usage available to the fabricators. A mass balance has been estimated in these processes as well as approximate quantities of other materials used in processing. Source terms have been calculated for several chemicals and particulate matter.

This work was performed under the auspices of the U.S. Department of Energy by Lawrence Livermore National Laboratory under contract W-7405-Eng-48.
